ALUMNI NEWS AND NOTES **Quebec-Labrador Foundation**

Returning to the "Coast"

In July of 2018, QLF board member Jo-Ann (Stanwood) Watson joined Senior Consultant Dr. Kathleen (Kath) Blanchard on a return visit to Harrington Harbour, Ouebec Lower North Shore – her first visit since the

mid-1980s. You can imagine the happy reunions, as Jo-Ann was met with the same warmth and hospitality that she had experienced as a QLF Swim Instructor

and Area Coordinator more than three decades earlier. Her reunion with Amy Evans, who had hosted Jo-Ann, was especially heartwarming. Harrington Harbour is where QLF began.

Jo-Ann Watson was pleased that the community has continued its swimming instruction program and maintained the community pool for decades—an example of solid community commitment. For fishing families, knowing how to swim even a stroke or two could be essential for survival.

St. Mary's Island Forty Years Later

Kath Blanchard interviewed residents of Harrington Harbour and now is making plans for a renewed seabird conservation program that will help ensure the long-term sustainability of Quebec Lower North Shore seabird populations. Timing is critical as news broke recently that the last remaining federal migratory bird officer position would be transferred off the Coast. There has been an outpouring of concern from local residents supporting the call for new conservation efforts.

With the help of Wayne Foreman, son

of former lightkeeper Gordon Foreman. Kath Blanchard traveled to St. Mary's Island to observe the seabird colonies and assess the condition of buildings. The fog lifted just as they anchored in the same cove where boatloads of children and

QLF Intern instructors had landed each summer over two decades. The interpretive panel, created in the 1990's by QLF staff and Interns, which describes the sanctuary, was in good shape. The climb to the hilltop revealed severe deterioration of the light station buildings and lighthouse. The sanctuary was alive with birds, from Red-throated Loons to Razorbills, burrowing puffins, and dense colonies of Common Murres! It was easy walking to the main puffin colony, thanks to a lengthy boardwalk,

Newfoundland & Labrador

Interns had an action-packed Lsummer teaching environmental education on the Northern Peninsula and at Point Amour on the Labrador side of the Straits. Thanks to the generosity of Barb Genge, owner of Tuckamore Lodge in Main Brook, Interns were comfortably housed at a renovated ski hut. From there they traveled to schools, taking part in community events from Port Saunders to St. Anthony, Newfoundland, giving 13 workshops on birds, marine species, Atlantic salmon, composting, and climate change to over 300 youth. When not teaching, the Interns monitored seabirds and whales in the Strait of Belle Isle and learned fly-tying skills from Hans van Klinken,

Message from QLF's President

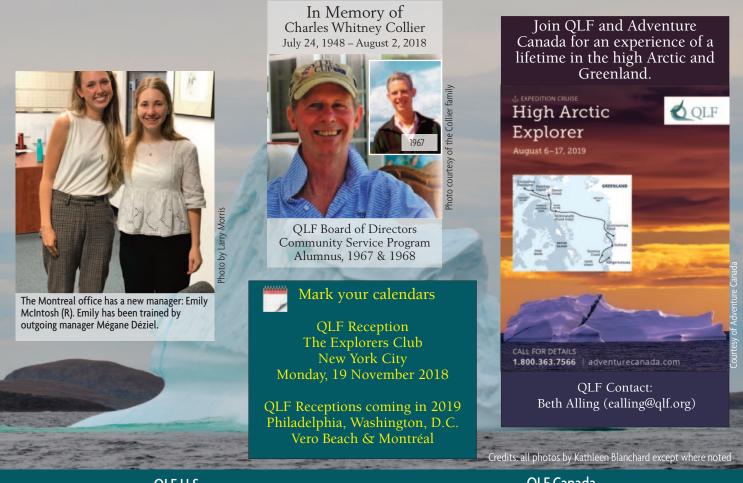

In 2021 QLF celebrates its 60th Anniversary! Such longterm presence in a region gives QLF standing as well as the ability to assess program impact. Such is the case in Harrington Harbour, where young parents who were taught water safety in the 1970's and 1980's or attended the St Mary's Island seabird conservation program are now assuming leadership positions in their home communities. I am certain that hundreds of QLF Alumni will recall how families embraced them as "come from aways." QLF Alumni have never forgotten the warm and caring welcome they received. A good example is the story of

the pillars that sustains us to this day. In 2019 we will renew some old programs like St. Mary's and create some new ones. A winning formula.
